1/ Recopie et complète :

$$M = 3a + 5a = (\dots + \dots)a = \dots a$$
$$N = 9x - 5x = (\dots + \dots)x = \dots x$$
$$P = 4y + y = (\dots + \dots)y = \dots y$$
$$Q = 5t + 6t - 2t = (\dots + \dots - \dots)t = \dots t$$

2/ Écris plus simplement les expressions suivantes :

$$M = 2x + 7x \qquad N = 18a - 6a \qquad P = 8y - y \qquad Q = 7t + t - 5t$$
